Abstract of corresponding document: **WO2005005497**

The invention relates to an aqueous polymer dispersion that can be obtained by the radical polymerisation of a monomer mixture consisting of at least one compound containing an amide group, at least one cross-linking agent, and at least one monomer comprising at least one cationogenic and/or cationic group. The invention also relates to the polymers that can be obtained by drying one such polymer dispersion, and to cosmetic or pharmaceutical agents containing one such polymer dispersion or one such polymer.
